Sequence 10, Application US/09723546

Patent No. 6737259

GENERAL INFORMATION:
APPLICANT: Clark, Mike A

TITLE OF INVENTYON: Modified Arginine Deiminase
FILE REFERENCE: PHOE0059

CURRENT APPLICATION NUMBER: US/09/723,546

CURRENT APPLICATION NUMBER: 09/023,809

PRIOR APPLICATION NUMBER: 09/023,809

PRIOR FILING DATE: 1998-02-13

NUMBER OF SEQ ID NOS: 14

SOFTWARE PATENTIN Ver. 2.1

SEQ ID NO 10

LENGTH: S80

LYPE: PRT

ORGANISM: Qiardia intestinalis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 41480, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster: FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT APPLICATION NUMBER: US/09/270,767
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SSQ ID NO 41480

Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock.

Example 6; Page 9; 14pp; English.

The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of 1gE, and so preventing triggering and activation of mast cells and basophils and downregulation of 1gE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against 1gB-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and

Another polypeptide, comprising the exon 5 and 6 product, is given in AAW23068. Recombinant peptides encoded by exons 1-6 can be produced in eukaryotic or prokazyotic cells. Such peptides, and antichodies raised against them, are used in methods to treat the manifestation of allergy in dogs, e.g. to treat Type I immediate hypersensitivity, and for immunomodulation

The present invention describes a method (MI) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin E [19], comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MHC) class I molecule, and evaluating (T) for ability to elicit in a mammal a CTL response to naturally processed and presented IgE peptides, where a peptide that induces such a response is identified. Also described are compositions: (C1) comprising at least one immunogenic peptide (I) identified by (MI); (C2) comprising at least one isolated polymiclecitide encoding (I); and (C3) comprising antigen-presenting cells that recognise at least one (I). Where (I-3 are able to bind to at least one MHC class I molecule and to elicit in a mammal a CTL response to naturally processed and presented cells; in a mammal a CTL response to naturally processed and presented cells peptides. C1-3 have antiallargic, antiasthmatic, immunosuppressive, vasotropic, dermatological, antiallammatory and cytostatic activities, and can be used as inducers of a CTL response against IgE, and in vaccines. C1-3 can be used for modulating an IgE-mediated condition in a mammal. C1-3 are useful for modulating an IgE-mediated condition in a mammal. The mediated atopic of hypersensity in a mammal because it is a mammal of the presence of a CTL response against IgE-mediated on-acpoic the mediated in a mammal of the mediated on-acpoic to the mediated in a mammal of the mediated on the mediated on-acpoic to the mediated in a mammal of the mediated in a mammal of the mediated on a mammal of the mediated on the mediated on-acpoic to the mediated in a mammal of the mediated on the mediated on-acpoic to the mediated in a mammal of the mediated on-acpoic to the mediated in the mediated on-acpoic to the mediated in the mediated on-acpoic to the mediated in the mediated on account of the mediated on the mediated on-acpoic to the mediated in the mediated on-acpoic to the mediated on account of the med
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hypersensitivity condition, IgE myeloma in a mammal. Preferably, Cl-3 are useful for treating atopic hypersensitivity conditions (such as allergic rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-atopic hypersensitivity conditions (such as anaphylaxis, and urticaria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying peptides that induce cytotoxic T-lymphocyte, CTL response against IgE, by identifying peptide eliciting CTL response to IgE peptides naturally presented by major histocompatibility complex class I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              isolated gene (AAT29824) obtd. from a canine liver DNA library. The cloning of the IgB gene allows prodn. of large quantities of recombinant IgB using bacterial, yeast, mammalian, insect or viral systems. The IgB can be used in drug development (e.g. small molecule screening, assay development and anti-IgB antibody generation). Fragments of IgB can be used in vaccines or to prevent IgB-mediated hypersensitivity. The new sequence information permits targeted modulation of IgB-mediated immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

```
The invention describes an isolated nucleic acid molecule (I) encoding a portion of a feline IgE heavy chain protein. The methods and compositions of the present invention are useful for eliciting feline immune responses for and/or treating IGE-mediated responses, such as allergies. This is the amino acid sequence of a cat immunoglobulin E (IgE) constant region.
                                                                                                                                                                                                                                                                                                                                                                                                                                     heavy chain protein, useful for treating and/or eliciting feline immune responses for IGB-mediated responses, such as allergies.
                                antiallergic; IgE-modulator; vaccine; feline; IgE; immunoglobulin E; immune response; IgE-mediated response; allergy; cat; constant region.
                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid molecule encoding a portion of a feline IgE heavy chain protein, useful for treating and/or eliciting feline immur
Cat immunoglobulin E (IgE) constant region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 12; SEQ ID NO 14; 44pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABP96580 standard; protein; 496 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE.

(I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut or corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid cesiques 357-371 (ADRIGG1) and 146-162 (ADRIGG09) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and 3.76 was companion of IgE from cat and horse, but did not exhibit cross-reactivity with the epsilon-chain of IgE from cat loss human epsilon-chains of IgE. The present sequence is the cat IgE 3.76 recognition site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      용
                                                                                                                                                                                                       The present invention describes a method (M1) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin EE [IgB], comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MHC) class I molecule, and evaluating (T) for ability to elicit in a mammal a CTL response to induces such a response is identified. Also described are compositions: (CL) comprising at least one immunogenic peptide (I) identified by (MI); (C2) comprising at least one isolated polynucleotide encoding (I); and (C2) comprising at least one isolated polynucleotide encoding (I); and (C2) comprising at least one isolated polynucleotide are compositions: (C1) comprising at least one isolated polynucleotide and presented (C3) comprising at least one isolated polynucleotide encoding (I); and (C3) comprising at least one isolated polynucleotide and presented (C3) comprising at least one isolated polynucleotide and presented (C3) comprising at least one isolated polynucleotide and presented (C3) comprising at least on a least one used as inducers of a CTL response against IgE, and in can be used as inducers of a CTL response against IgE, and in vaccines. C1-3 can be used for modulating an IgE-mediated condition in a mammal. C1-3 are useful for modulating an IgE-mediated condition in a completed atopic hypersensitivity condition, IgE mediated on altergic rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-atopic hypersensitivity conditions (such as anaphylaxis, and urticaria thirds). The present sequence represents an IgE heavy chain amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                               Identifying peptides that induce cytotoxic T-lymphocyte, CTL response against IgB, by identifying peptide eliciting CTL response to IgE peptides naturally presented by major histocompatibility complex class I protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Feline, immunoglobulin E; IgE epsilon heavy chain, parasitic infection, IgE-mediated immune response, allergy; neoplasia, vaccine technology; antibody technology, antiallergic, antiparasitic, cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hives). The present sequence represents an IgE heavy chain amino acid sequence, which is given in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

The present invention relates to the isolation of feline immunoglobulin E (IgE) kappa light chain and tgg epsilon heavy chain proteins, and the polynucleotide sequences encoding them. The sequences of the invention are useful for treating feline IgE-mediated immune responses (e.g. allergies, parasitic infections or neoplasia), in vaccine technology, small molecule/antibody technology, molecular biology, and various immunological techniques related to feline IgE and its functions. The present sequence represents feline IgE epsilon heavy chain #2
                                                                                                                                                                                                                                      New nucleic acid molecule encoding feline immunoglobulin E (IgE) heavy or light chain protein, useful for treating feline IgE-mediated responses e.g. allergies, parasitic infections or neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Feline, immunoglobulin E; IgE epsilon heavy chain, parasitic infection, IgE-mediated immune response, allergy, neoplasia, vaccine technology; antibody technology, antiallergic, antiparasitic, cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "This sequence is given as SEQ ID No:5 and is specifically claimed in Claim 11"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQ ID No:8 and is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                       ш
                                                                                                                                                                                                                                                                                                The present invention relates to the isolation of feline immunoglobulin I (IgB) kappa light chain and IgE epsilon heavy chain proteins, and the polynuclectide sequences encoding them. The sequences of the invention are useful for treating feline IgE-mediated immune responses (e.g. allergies, parasitic infections or neoplasia), in vaccine technology, amall molecule/antibody technology, molecular biology, and various immunological techniques related to feline IgE and its functions. The present sequence represents feline IgE epsilon heavy chain #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid molecule encoding a portion of a feline IgE heavy chain protein, useful for treating and/or eliciting feline immune responses for IGE-mediated responses, such as allergies.
                                                                                                                                                                              New nucleic acid molecule encoding feline immunoglobulin E (IgE) heavy light chain protein, useful for treating feline IgE-mediated responses e.g. allergies, parasitic infections or neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiallergic, IgE-modulator, vaccine, feline, IgE, immunoglobulin E, immune response, IgE-mediated response, allergy, cat, heavy chain.

The methods and compositions of the present invention are useful for eliciting feline immune responses for and/or treating IGE-mediated responses, such as allergies. This is the amino acid sequence of a partial cat immunoglobulin E (IgE) heavy

naturally processed and presented light peptides, where a peptide that induces such a response is identified. Also described are compositions: (C1) comprising at least one immunogenic peptide (I) identified by (M1); (C2) comprising at least one isolated polynucleotide encoding (I); and (C3) comprising antigen-presenting cells that recognise at least one (I). Where C1-3 are able to bind to at least one MHC class I molecule and to elicit in a mammal a CTL response to naturally processed and presented IGE peptides. C1-3 have antiallergic, antiasthmatic, immunosuppressive, vasotropic, dermatological, antiinflammatory and cytostataic activities, and can be used as inducers of a CTL response against IgE, and in vaccines. C1-3 can be used for modulating an IgE-mediated condition in a mammal. C1. C1-3 are useful for modulating an IgE-mediated condition in a ligh-mediated atopic hypersensitivity condition, IgE myeloma in a mammal. Preferably, C1-3 are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful for treating atopic hypersensitivity conditions (such as allergic rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-atopic hypersensitivity conditions (such as anaphylaxis, and urticaria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin B (IgB), comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (WHC) class I molecule, and evaluating (T) for ability to elicit in a mammal a CTL response to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antiallergic; antiachmatic; immunosuppressive; vasotropic; cytostatic; dermatological; antiinflammatory; IgE-mediated condition; food allergy; atopic hypersensitivity condition; allergic rhinitis; allergic asthma; atopic dermatitis; non-atopic hypersensitivity condition; anaphylaxis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying peptides that induce cytotoxic T-lymphocyte, CTL response against IgE, by identifying peptide eliciting CTL response to IgE peptides naturally presented by major histocompatibility complex class
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention describes a method (M1) for identifying peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hives). The present sequence represents an IgE heavy chain amino acid sequence, which is given in an example from the present invention
                                                                                                                                                                                                                                                                                                       Duckbilled platypus IgE heavy chain amino acid sequence SEQ ID NO:29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is an immunogenic peptide consisting of the heavy chain constant regions 2, 3 and 4 of the platypus IGE. It was used to construct a number of immunogenic peptides which consisted of regions of IGE from different mammals, which appear to cause a stronger polyclonal anti-self IGE response than peptides consisting of the same regions from one mammal. Immunogenic peptides, particularly those consisting of different heavy chain constant regions, can be used for vaccination in humans, against bacterial and viral infections and allergies, such as asthma, fur, pollen and food allergies and eczema
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunogenic polypeptides useful for preventing the harmful effects of immunoglobulin \boldsymbol{E} in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present sequence is the protein sequence of an opossum CH2-rat CH3-opossum CH4 (ORO) chimeric IgE polypeptide. A vector comprising a nucleic acid encoding ORO can be used for recombinant production of this chimeric IgE in host, e.g. CHO, cells. The invention provides methods and materials related to expressing chimeric IgE proteins. Nucleic acid vectors, host cells, and methods for producing chimeric IgE polypeptides are provided. When administered to a mammal, the chimeric polypeptides can reduce the IgE antibody effects of IgE-related diseases such as asthma, allergies and eczema.
                                                                                                                                                                                                                                                                                                                                                                                                                New host cell comprising a nucleic acid vector comprising a cytomegalovirus promoter, an Ig leader sequence, an insert sequence or SV40 late polyadenylation sequence, useful in producing a chimeric IgE polypeptide.
